Your frost-fighting ally

Burning time of 10 hours

Due to the progressive climatic changes, the probability of milder winters and an earlier blossoming period increases. Therefore, higher damages by **late spring frosts** are to be expected for orchards and vineyards.

During the last years, the **economic losses** due to spring frosts in the agricultural sector have reached **vast proportions** throughout Europe.

The use of fire as a protection against spring frosts in orchards and vineyards has been known for a long time. So, make sure to be prepared with our **STOP-ICE ® anti-frost candles**.

In contrast to other frost-fighting methods, the anti-frost candles warm up the air and are thus an **ideal** protection **against radiation frosts or advection frosts**.

2 ecological firelighters included:

- 100% pure **natural product** made from renewable resources
- Odourless and poses no health risk
- **Enormous time-savings** due to the quick and efficient lighting of the candles in just a few seconds

Advantages of the STOP-ICE ® anti-frost candles:

- **Burning time of 10 hours**
- No additional firelighter is needed, thanks to the **integrated ecological firelighters**
- **Closable lid:** to extinguish the flame, just cover it with the lid – in case of re-use, it is easy to open without technical aids.

Production:

Our modern and efficient production facilities enable **high capacities** as well as an **optimum quality** of our **STOP-ICE ® anti-frost candles**.

We can therefore produce and deliver large quantities in a short period of time.
